

Network Solutions® Now Offers a Free Business Profile with Domain Purchase

Network Solutions® now provides free business profiles with each domain name purchase. The profile establishes an immediate online presence with relevant information and search engine benefits.

([PRWEB](#)) March 9, 2009 -- Leading Web solutions provider and domain name registration pioneer Network Solutions® gives small businesses an instant free web presence by providing a free business profile with each [domain](#) purchase. The profile is optional and can feature information about the company, including basic contact details, an in-depth business description, lists of products and services, discount offers, payment methods, and the business' scheduled hours of operation. Interactive features such as maps, social bookmarking, driving directions, and text messaging are also available.

"Customers can easily create an instant web presence by filling out a simple form," said Matt Ho, Director of Marketing Services for Network Solutions. "Besides creating an instant business profile, it also gives our customers an added search engine benefit of appearing in our ThinkLocal® directory for U.S. based companies, which will attract the attention of search engines through meaningful, relevant content and back links."

Published at the customer's domain, the free [business profile](#) allows visitors to quickly and easily add a link from their Website to the profile using the "Link to us" feature. Links to the business profile help to elevate the company's ranking in search engine results.

Ho added, "The contents of the profile can be updated daily, further making the profile a magnet for search engines like Google® and Yahoo® which like frequently updated and relevant information."

Once a company's website is ready, the customer may choose to replace the business profile at the domain.

For more information on free business profiles and other benefits to domain purchases, visit [Network Solutions](#).
