

## CSS Management Tutorial

### Introduction

Many Network Solutions customers edit CSS (Cascading Style Sheet) for their E-Commerce stores. Editing your CSS in version 7 will be different than version 4; below are a few tips to help you edit your version 7 store:

### How to edit CSS in version 7:

1. Click the File Manager link under "Utilities" in your Control Panel.
2. Select the Themes folder.
3. Select the theme you are going to edit.
4. Select the CSS folder.
5. Click on the CSS file you wish to edit, and click File > Open in the text editor.

### Some useful CSS editing commands

#### Product Page

To hide the quantity text near the quantity box:

- `div.prod-detail-purchase label { display:none; }`

To hide the product list description:

- `div.product-list-text { display:none; }`

To hide the More Info button on product lists:

- `div.product-list-control a { display:none; }`

To disable the "View Product" button under the products on the home page:

- ```
<style type="text/css">
div.product-list-control a { display:none; }
</style>
```

To hide Product Reviews on the Product List Pages but show them on the Product Details Pages:

- `div.product-list-rating { display:none; }`

## CSSManagement2 Tutorial

### Category Page

To remove the short description on category pages:

- `product-list-text { display:none; }`

### Other Pages

To remove the border around custom pages:

- `table.content {border: none; }`

To change the color of the Right/Left column cart text:

- `td.mod-body-body { color:#FFFFFF; }`

To add space to the center content:

- `td.page-content-center { padding: 0 10px }`

## For Additional Information

For more detailed CSS instructions, there are several online resources to which you can refer:
